PRODUCT DESCRIPTION

The powerful high-voltage, modular Pylontech Force H2 batteries have a power of 3.556 kW (capacity of one block, the illustration shows three blocks with a BMS unit) and a voltage of 96 V.

These batteries are characterized by great functionality and functional design and easy expandability. They are great for the residential sector. Pylontech Force H2 stack "on top of each other" and therefore it is not necessary to buy a storage rack or cables for connecting individual batteries with these batteries. It is necessary to buy a BMS with the batteries, which "sits" on the batteries.

The maximum number of battery modules for Pylontech Force H2 batteries is 4 pcs, so the maximum battery size is 14.21 kWh. Force H2 batteries are based on LiFePo4 technology and have a long service life, up to 4000 cycles. They are compatible with GoodWe ET series inverters.
